

FREE CLOUD SECURITY AND COMPLIANCE ASSESSMENT

How confident are you in your organization's cloud security posture?

Technical professionals across a broad cross section of organizations have spoken about their top cloud challenges. The results show that the rise in cloud adoption is leading to an increase in challenges around managing governance, security, and compliance.

Cloud Challenges by Company Size

Public cloud security – evolved

Modern organizations constantly evolve in the public cloud to leverage services beyond just the basic compute, storage, and network services. These organizations take advantage of top growing services in serverless, containers, and Kubernetes, while the techniques used by cybercriminals grow to exploit vulnerabilities in architecture and configurations.

Your IT security needs to evolve to match these new tactics and threats, and Sophos is pleased to offer you a free assessment using our Cloud Optix platform to help you uncover potential security weaknesses.

Network visualization

Complete network topology visualization diagrams for all environments, with a detailed inventory of your organization's public cloud assets.

Audit-ready reports

Your choice of audit-ready compliance and security best practice reports for standards including GDPR, CIS, HIPAA, ISO 27001, and PCI DSS.

Recommendations

Identification and remediation recommendations for security vulnerabilities and compliance alerts that will place your organization at risk.

How the assessment works

Our experts will guide you through the setup of our agentless Cloud Optix technology. Using read-only access, this proactive assessment will then uncover how your Kubernetes clusters, Amazon Web Services, Microsoft Azure, Google Cloud Platform, and Infrastructure-as-Code environments stack up to the latest security and compliance best practices, providing your team a detailed summary with recommendations.

Stage One: Understand your public cloud environments

Scope of work

- Identify public cloud platforms in use (Kubernetes clusters, Amazon Web Services, Microsoft Azure, Google Cloud Platform, and Infrastructure-as-Code environments)
- Assisted set up of Cloud Optix across agreed public cloud environments
- Demonstration of the Cloud Optix console
- Security best practices and compliance policy configuration

Stage Two: Security and compliance review

Scope of work

- Visibility of cloud assets and security posture (includes hosts, containers, networks, user accounts, storage services, and serverless functions)
- Details of current security best practice and compliance status (GDPR, ISO 27001, CIS benchmarks, and PCI DSS etc.)
- Review threats requiring immediate attention
- Highlight remediation tasks

Stage Three: Assessment findings presentation

Scope of work

- A member of the Sophos team will present a detailed summary of our findings, including a review of alerts and our recommendations for remediation

Why we offer a free assessment

Sophos offers this service at no charge to demonstrate our ability to uncover unknown vulnerabilities in your public cloud infrastructure. We're sure that once we prove that value, you will consider our industry-leading solution to address those threats and ensure your cloud-based technology is just as secure as if it were still protected in your own corporate network.
